

This is section 1 of Math 23a. It includes R programming and data analysis instead of single-variable real analysis. It meets the QRD requirement. The website for section 2, which includes single-variable real analysis in place of R and which does not meet the QRD requirement, is [here](#).

This [syllabus](#) explains in detail the difference between the two sections.

To make sure you have the latest version of the course files, please go to [this site](#) for download.

Proof Logger

If you opt into proof logging, you need to register [here](#). A member of the staff will need to manually confirm your account. Be sure to sign up before the first section. If you sign up after the first week, email Michael to ensure that your account is confirmed.

Gradescope

All assignments and exams must be submitted to Gradescope, rather than to Canvas. At this point, you should have received an email that your Gradescope account was created. If not, you can sign up with the access code 9W8P42.

Section (In U.S. Eastern Standard Time)

There is only one section in Math 23a 001. You can sign up to present a seminar topic before each class at the below google document. For full seminar credit, you must sign up to present at least 10 times throughout the semester.

Paul and Chris -- Thursday, 3 p.m. -- [sign-up sheet](#)
