

**Course Title:** HEB 1370 Puzzles of Humanity: Human Life History and How it Evolved

**Level:** Introductory undergraduate lecture

**Instructor:** Kris H. Sabbi (Peabody, 50C)

**Meeting Times and Location:** Tues/Thurs. 9:00-10:15 am, 52H

**Office Hours:** TBA, or schedule via Zoom

**Course Description:**

As humans, the combination of characteristics that make up our life history—the timing and pace of our growth, reproduction, and aging—set us apart from other animals including our closest cousins, the great apes. In this course you will learn about humans' puzzling combinations of fast and slow life history and how these patterns evolved. We will apply evolutionary theory to better understand human behavior and biology, especially through comparing ourselves to our great ape cousins and other animals. Throughout the semester we will tackle questions like why do we take so long to grow up? How do evolutionary forces shape mating decisions across cultures and time? Why do we outlive our ability to reproduce? By the end of this course you will gain a firm understanding of how to apply evolutionary concepts to understanding our own evolutionary histories.

**Learning Objectives:**

- (1) Describe key differences in human life history and how they evolved,
- (2) Apply evolutionary concepts to explain modern human variation,
- (3) Use available evidence to evaluate existing hypotheses and devise new ones,
- (4) Gain research skills to design potential tests of your hypotheses,
- (5) Communicate effectively about core concepts in this course

**Required Readings:**

This course will require two (2) textbooks: *How Humans Evolved* (9<sup>th</sup> or 10<sup>th</sup> Edition) by Joan Silk and Robert Boyd, and *On Fertile Ground*, by Peter Ellison.

Additional readings will be posted to the course website.

**Requirements and Grading (See Detailed Grading and Course Policies Below):**

Grading for this course will follow FAS Letter Grade guidelines and will be based on a mixture of prepared assignments and in-class assessments. While attendance is not graded explicitly, part of your grade will include in-class activities that may not be made up. Additionally, there will be three exams over the course of the semester and one cumulative final. Each exam will include all course materials, including information that is specific to course lectures. For these reasons, attendance is strongly encouraged. Extra credit opportunities will be offered 2-3 times throughout the semester and will be worth up to 5% of total grade.

- |     |   |
|-----|---|
| 30% | Prepared assignments (Due before class begins, drop lowest score) |
| 20% | In-class activities (4 x 5% each due at the end of class)         |
| 30% | Quizzes (3 x 10% each)  |
| 20% | Final Paper (cumulative)  |

## Course Schedule

Please keep in mind that this syllabus is a living document. All assignments, subjects, readings and due dates are subject to change throughout the semester. I will usually announce each change in class to keep us all on top of things, but please check the syllabus regularly for updates, especially regarding deadlines and readings.

**Notes about readings:** Silk and Boyd refers to your textbook “How Humans Evolved,” whereas EHLH refers to your textbook “The Evolution of Human Life History.” Each reference will be followed by the chapters to read for the particular class period. All other references refer to PDFs that I will upload to Canvas. PDFs will be uploaded at least one week prior to class and will be named starting with the week that they are required for (e.g. “Week1\_Reading”) followed by the lead author of the reference. If a reading is missing please notify me ASAP.

## Section 1: An Evolution Primer and Intro to Life History Theory

In this section, we will lay the groundwork for the rest of the course, focusing on core concepts of evolutionary and life history theory.

Section 1	Topic	Readings	Assignments
Week 1: Sep. 5	Welcome + Intro	Syllabus	
Sep. 7	Evolutionary Concepts Part 1	Silk and Boyd Ch. 1-2	
Week 2: Sep. 12	Evolutionary Concepts Part 2	Silk and Boyd Ch. 3 Bergman and Beehner, 2022	
Sep. 14	Concepts in Life History Part 1	Hill, 1993	
Week 3: Sep. 19	Concepts in Life History Part 2	Del Giudice, Gangstad, and Kaplan 2015	
Sep. 21	Primate Patterns	Silk and Boyd Ch. 8	Assignment 1 Due
Week 4: Sep. 26	Broad Patterns in Human Life History Part 1	EHLH Ch. 2, 3	
Sep. 28	Broad Patterns in Human Life History Part 2	Journal Club: Jones, 2011, Curr. Bio. Powell et al., RSPB	Journal Club for Section 1

## Section 2: From Growing Up...

Our first puzzle starts right after birth: why do humans take so much longer to grow up than expected? In the second section of this course, we will explore competing hypotheses aimed at explaining this phenomenon.

Section 2	Topic	Readings	Assignments
Week 5: Tu. Oct. 3	Brain, Body, Behavior, and Development 1	Bogin, 2015 Thompson and Nelson, 2016 Smith, 2013	Quiz 1
Th. Oct. 5	Brain, Body,	Kuzawa et al., 2014 &	

	Behavior 2	Responses to Kuzawa et al.	
Week 6: Tu. Oct. 10	Flex Day	A day for catching up on things	
Th. Oct. 12	Virtual Guest Lecture		
Week 7: Tu. Oct. 17	The Advent of Childhood	EHLH Ch. 7 Bernstein, 2016	
Th. Oct. 19	Adolescent Transitions	Reiches, 2019 Sisk and Zehr, 2005	<b>Assignment 2 Due</b>
Week 8: Tu. Oct. 24	Why do we take so long to grow up?	<u>Journal Club:</u> Joffe, 1997 Janson and van Schaik, 2002 Del Giudice et al., 2015 Sabbi et al., 2020	<b>Journal Club for Section 2</b>
Th. Oct. 26	<b>Exam 2</b>		

### Section 3: ...To Prime Time

In juxtaposition to our long developmental periods, humans can reproduce much more quickly than our great ape cousins. How is that possible? How does human biology mix with cultural constructs to shape our reproductive patterns?

Section 3	Topic	Readings	Assignments
Week 9: Tu. Oct. 31	Human Mating and Reproductive Systems	Silk and Boyd Ch. 6, Ch 15 pp 409-421  Scelza, 2013 Simmons, 2005	
Th. Nov. 2	Ethnography: Mating/Marriage across Cultures	Dance With the Wodaabe	
Week 10: Tu. Nov 7	Gestation and Birthing	Ellison Ch. 2,3	<b>Which Culture?</b>
Th. Nov 9	Motherhood	Ellison Ch.	
Week 11: Tu. Nov. 14	Fatherhood	Gettler et al. 2020 Seward and Stanley-Stevens 2013  <u>Journal Club:</u> Boyette et al., 2020 Murray et al., 2016 Rosenbaum et al., 2015 Sarkadi et al., 2008	<b>Journal Club for Section 3</b>
Th. Nov. 16	<b>Exam 3</b>		<b>Assignment 3 Due</b>

#### Section 4: ...Through the Other Side

Most species continue reproducing until the end of their lives- why don't humans?

Section 4	Topic	Readings	Assignments
Week 12: Tu. Nov. 21	Long Lifespans and Senescence	Ellison Borgerhoff Mulder, 1998 Jaeggi, et al., 2022	
Th. Nov. 23	THANKSGIVING, NO CLASS		
Week 13: Tu. Nov. 28	Menopause	Ellison  Hawkes and Coxworth, 2013 Lahdenpera et al., 2004 Monaghan et al., 2023	
Th. Nov. 30	Grandmothers Across the Animal Kingdom	<u>Journal Club:</u> Grimes et al., 2023 Lahdenpera, et al., 2016 Natrass et al., 2019 Scelza and Hinde, 2019 Wood et al., 2023	<b>Journal Club for Section 4</b>
Week 14: Tu. Dec. 5	Choose your own Adventure		<b>Assignment 4 Due</b>

**Final Exam:** Cumulative (TBA)

#### Detailed Grading and Course Policies:

##### Prepared Assignments:

There will be four (4) reading assignments due over the course of the semester- one for each session. Each student must complete at least three of the four assignments, including the final assignment due during the last full week of the course. Any student who completes all four assignments will have their lowest grade counted toward extra credit points. Each assignment will be posted to Canvas including a rubric for grading the assignment.

##### Journal Club:

During each section of the course, we will have a journal club dedicated to reading primary research papers about the topic in that section. We will divide the reading responsibilities among students for each journal club depending on the number of students in the class. At least once during the semester, each student will be responsible for summarizing the main findings of a paper for the class at the start of a journal club.

##### In Class Assignments:

While attendance is not explicitly required in this course, over the course of the semester there will be four in-class assignments that will be graded and will not be announced ahead of time. For the most part, these activities are designed to be fun and could include break-out

discussions, in-class group readings, video activity sheets, etc. These activities may only be completed in class and may not be made up.

**Exams:**

Over the course of the semester, we will have three in-class exams scheduled during our meeting time. Each exam will occur toward the end of a course section and focus on materials that we have learned during that section. In that way, exams are not necessarily cumulative, *however*, you should keep in mind that many of the concepts for each section cross over into the next so expect to apply ideas that you have learned previously during any exam. Students must be in attendance to sit for exams except for in cases described in the Harvard Student Handbook (p. 37-43).

**Final Exam:**

The final exam will be cumulative and consist of several medium- and long-format questions. We will go over the format of the exam and some tips for studying in our final review session.

**Extra Credit:**

During the semester I will offer opportunities to earn extra credit that will be announced in detail as they come up. Everyone is welcome to participate and, together, all extra credit will be worth no more than 5% of your total grade.

**Academic Integrity, Academic Dishonesty, and the Harvard College Honor Code:**

You will be expected to adhere to Harvard's official policies on academic integrity, academic dishonesty, and the college honor code as outlined in the Student Handbook (pg. 35-37).

"Members of the Harvard College community commit themselves to producing academic work of integrity — that is, work that adheres to the scholarly and intellectual standards of accurate attribution of sources, appropriate collection and use of data, and transparent acknowledgment of the contribution of others to our ideas, discoveries, interpretations, and conclusions. Cheating on exams or problem sets, plagiarizing or misrepresenting the ideas or language of someone else as one's own, falsifying data, or any other instance of academic dishonesty violate the standards of our community, as well as the standards of the wider world of learning and affairs."

**Statement about Generative Artificial Intelligence:**

Generative AI tools (e.g. Chat GPT) are an incredible new technology with the potential to unlock new frontiers across many facets of our lives. As an emerging technology, the capabilities of these tools are quickly changing rapidly and their use in education is burgeoning. However, we must also acknowledge the limitations of these tools as we learn to apply them. Therefore, **Generative AI tools (e.g. ChatGPT) may be used only when (and how) specified for any and all graded work for this course, and otherwise are not permitted.**

An excerpt from the University: "The Harvard College Honor Code requires adherence to "accurate attribution of sources" and the "transparent acknowledgement of the contribution of others" to "ideas, discoveries, interpretations, and conclusions." As such, all material included in assignment submissions must be properly attributed to sources (using quotations and citations as appropriate). Failure to attribute material to its original source constitutes plagiarism. Students should be aware that generative AI tools often generate incorrect statements,

generate fake sources, and/or do not attribute material to proper sources. **Students must acknowledge all instances in which generative AI tools were used in an assignment** (such as in ideation, research, analysis, editing, debugging, etc.). All submitted work by a student must either be original work or properly attributed to external sources, as stated by the Harvard College Honor Code. Students are responsible for the entirety of their final submission; any inaccuracies or other deficiencies cannot be excused on the basis of originating from an AI tool.”

### **Academic Accommodations:**

As your instructor in this course, I will do my best to support your success. In line with the student handbook, students with visible and/or invisible disabilities are encouraged to reach out to the Harvard Disability Access Office (<https://dao.fas.harvard.edu/>) as early as possible to arrange any necessary accommodations.

### **Discrimination and Bullying:**

From the student handbook:

“On September 1, 2023, the University adopted new policies and procedures to address discrimination and bullying. These policies apply to all students, faculty, staff, researchers, and other members of the Harvard community across all Schools and units, including the FAS. More information about these policies can be found on the Provost’s Office website (<https://communitymisconductpolicies.harvard.edu/reports-and-draft-policies>).

Discrimination based on race, color, sex, gender identity, sexual orientation, religion, creed, national origin, age, ancestry, veteran status, disability, military service, or any other legally protected basis is contrary to the principles and policies of Harvard University.

#### *Discrimination on the Basis of Sex, Sexual Orientation, and Gender Identity:*

Sexual harassment, including sexual violence, and other sexual misconduct are forms of sex discrimination. The University’s policies and procedures concerning complaints of discrimination based on sex, sexual orientation, or gender identity can be found here: <https://oge.harvard.edu/policies-procedures>.

Formal complaints are submitted to the University Title IX Coordinator and investigated by the Office for Dispute Resolution (ODR). If a Harvard College student is found to have violated the policy, the College’s Administrative Board will consider appropriate sanctions. The College’s Title IX Resource Coordinators can answer questions about the process for filing a formal complaint, and speaking to a Title IX Resource Coordinator does not automatically trigger a formal complaint.

#### *Discrimination on Other Bases:*

Ordinarily, students should direct their initial inquiries regarding discrimination to their Resident Dean or to the Office of the Dean of Harvard College. Students can also report an incident of bias, harassment, and/or discrimination by emailing [reportbias@fas.harvard.edu](mailto:reportbias@fas.harvard.edu) or by submitting an incident report via the anonymous bias report form (<https://diversity.college.harvard.edu/report-bias>).

Undergraduates who feel that they have been subjected to discrimination may wish first to seek a resolution of the problem with the assistance of their Resident Dean. These officers may

consult with others in the College and the FAS, including, for example, the Office of the Dean of Harvard College, or the Director of the Disability Access Office, depending on the nature of the concern.

If the matter cannot be resolved satisfactorily by informal methods, more formal routes are available. The student may lodge a complaint with the Office of the Dean of Harvard College. Depending on the circumstances, and in consultation with the student making the complaint, that officer may request that the Dean of Harvard College appoint a special committee to resolve the problem or may refer it to the appropriate agency or office of Harvard College or of the FAS for resolution. Such agencies include, among others, the Administrative Board, the Faculty Council, and the Dean of the FAS.

If the matter cannot be resolved satisfactorily through ordinary channels, either the student or the Dean of Harvard College may refer it to the Dean of the Faculty for final resolution. The Dean of the Faculty holds authority over all departments, committees, commissions, and councils within the FAS. The decision of the Dean of the Faculty will be final.”

## Appendix A: List of additional readings (APA format)
